SmartCase SC1230

To support Public Access Defibrillation and provide the best protection for the AED, GT Medicare developed the SC1200 series outdoor AED cabinets. The most effective, straight forward designed AED cabinet, which ensures the **best performance** for the **lowest price**.

The cabinet is equipped with a 24V heating element, active ventilation and a polycarbonate impact-proof window. After operating the door handle the AED can easily be removed and the red LED light will illuminate, accompanied by an intermittent alarm. The SmartCase should be connected to a 230V/ 110V power supply, which the adapter converts to 24V.

Technical Specifications

Type	SC1230
Weight	9 kg
Dimensions	40(h)x40(w)x20(d)cm
Shockproof	✓ IEC61439-5 clause 10.2.101.2/3
